What's New In AutoCAD?

With the new Markup Import and Markup Assist features, you can import feedback directly into your drawing and add changes automatically, without having to manually type each change. Starting with AutoCAD 2023, you can quickly import feedback from printed paper or PDFs that have been added to your drawing as attachments. You can also assign a comment to a drawing, and AutoCAD will export comments from the drawing and automatically add comments to drawings you import. AutoCAD stores the comments from the imported drawing along with the drawing, making them easy to access for reference. When you receive feedback on your drawing, you can immediately incorporate it into your own work without having to create a new drawing file or manually enter changes to the drawing. Simply import the attachments, and any changes you made are imported and automatically applied in your drawing. Here's how it works: When you receive feedback on your drawing, you can quickly import it and make changes directly in your drawing. Import a feedback document into your drawing. Save the imported document. Make changes to the imported document and save it again. With the changes saved, you can continue working and send the updated drawing back to the person who provided feedback. You can also generate comments based on the feedback received. These comments are stored along with the drawing. Clients can use comments to reference your work. The Markup Import and Markup Assist functions are found on the File tab in the AutoCAD Tools panel. The Import function is found under the Comments category, and the Markup Assist function is found under the Markup category. A new Markup category is also available to automatically tag drawings with comments and comments with colors. The Markup category lets you quickly insert and annotate comments in drawings. With the new Markup category, you can immediately import comments into your drawings. You can also generate colors based on the comments in the drawings, assign colors to comments, and generate colors for blocks. Let's look at each function in more detail. Import comments Start by importing comments and making changes to the imported drawing as needed. Open a drawing in AutoCAD that includes feedback from a coworker, vendor, or other source. Open the Markup Import and Markup Assist dialog box. Click Import comments in the Comments category. You can import comments from
